

Pose Labeling Instructions - Fork

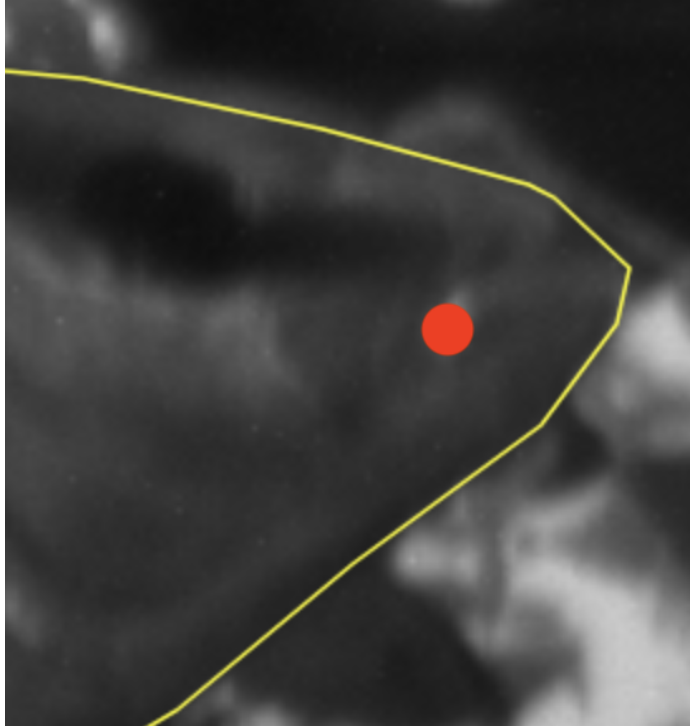

Please **READ INSTRUCTIONS COMPLETELY** before labeling

- Make the points on top or very close to the body part
- Draw labels only if you see the fish completely inside the frame
- Don't label an image if it's too dark to see the fish or body part(s) clearly
- Don't label the fish which appear to be too far away
- Typically you may find 2 to 3 clear and large fish per image to label if it is not too dark or distant

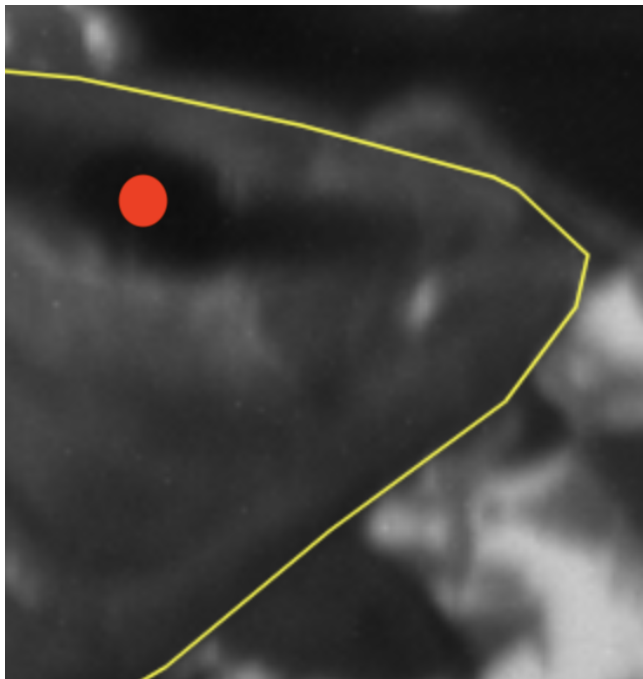

An Example **correct label**

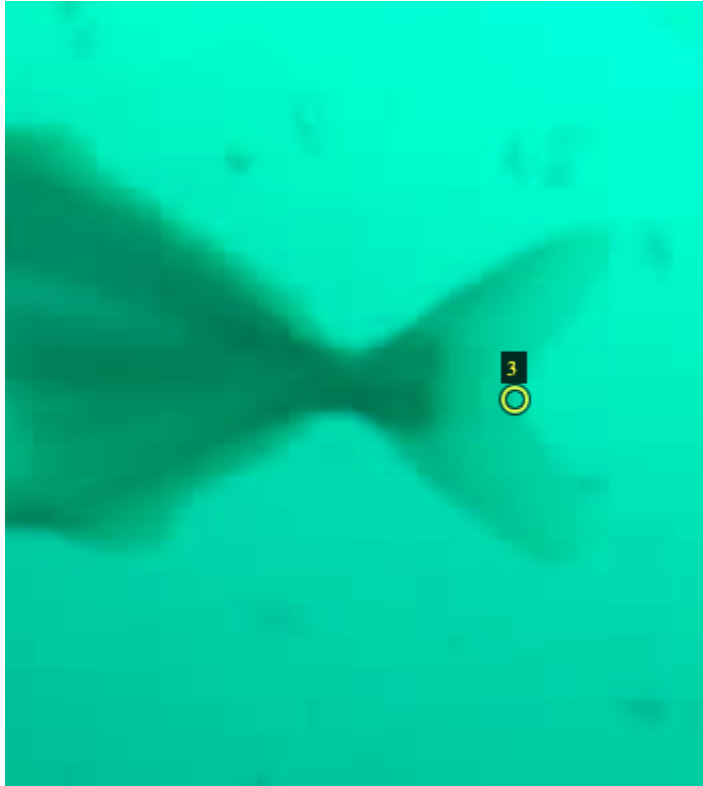

For Mouth: The outline should pass outside the mouth. An example image is shown below. Place the point at the edge of the lips

For Eye: The place the point at the center of the pupil

For Tail: Place the label on the intersection part. An example image is shown below

Here are the examples which are **incorrect** and needed to be avoided

- Incorrect label of the mouth. Don't put the point at the tip of the mouth

- Incorrect labels of the tail. Make sure that the label ends near the end of the tail
