

# Labeling Instructions - Whole fish

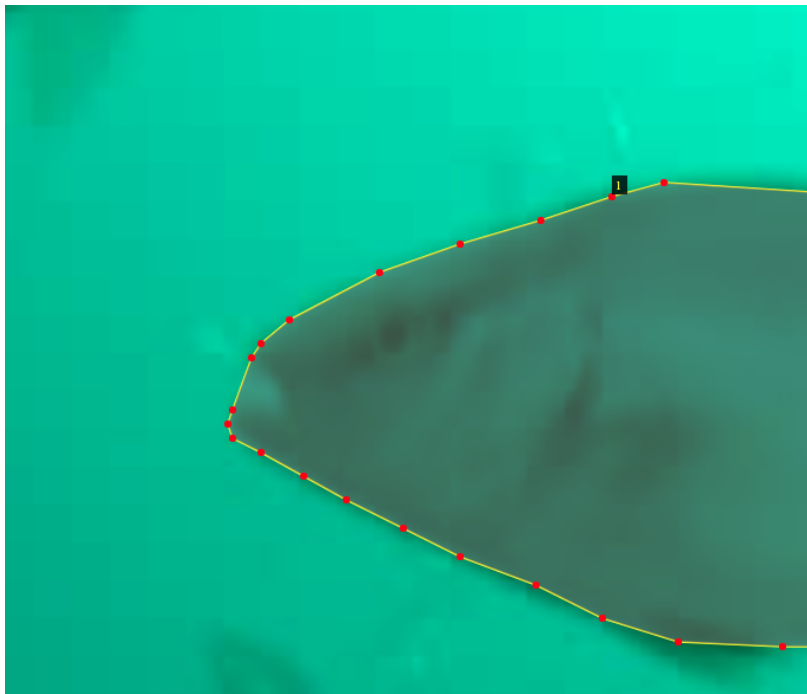

**Draw the boundary around the fish and DO NOT include fins. Please READ INSTRUCTIONS COMPLETELY before labeling**

- Make the polygon tight around the fish
- Draw labels only if you see the fish completely inside the frame
- Don't label an image if it's too dark to see the fish or body part(s) clearly
- Don't label the fish which appear to be too far away
- Typically you may find 2 to 3 clear and large fish per image to label if it is not too dark or distant

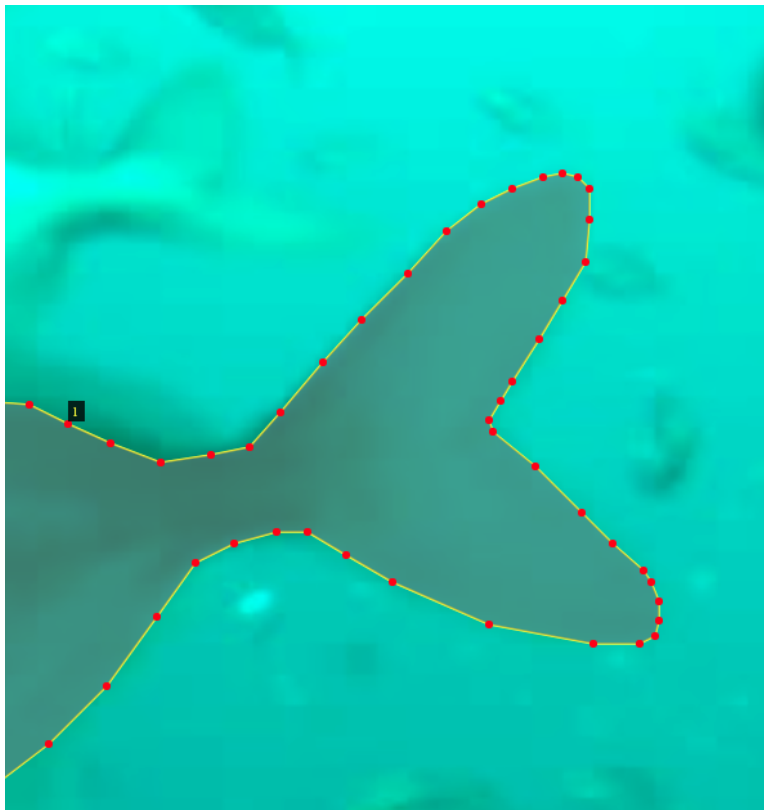

An Example **correct label**

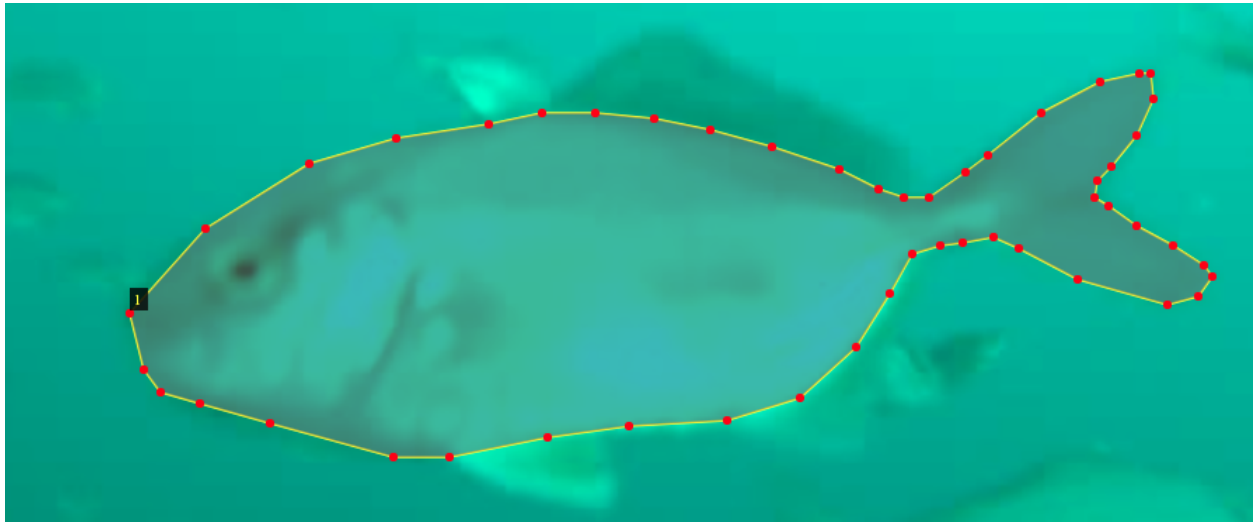

**For Mouth:** The outline should pass outside the mouth. An example image is shown below

**For Tail:** Label over the entire boundary of the tail

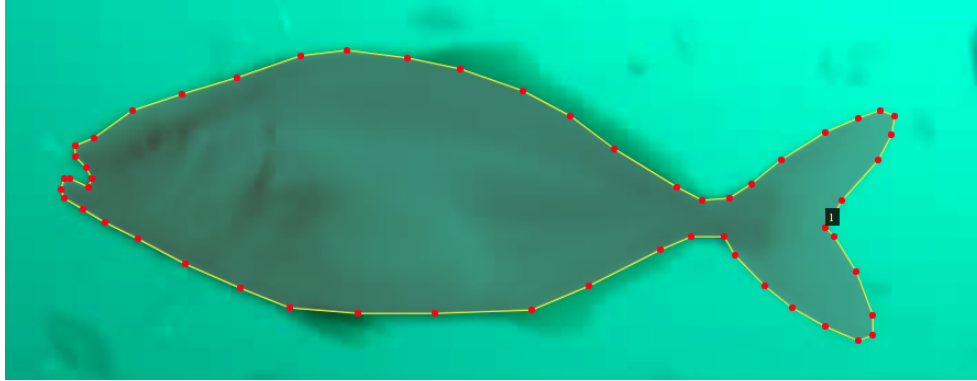

Only draw the outline of the fish with skin and not over the fins

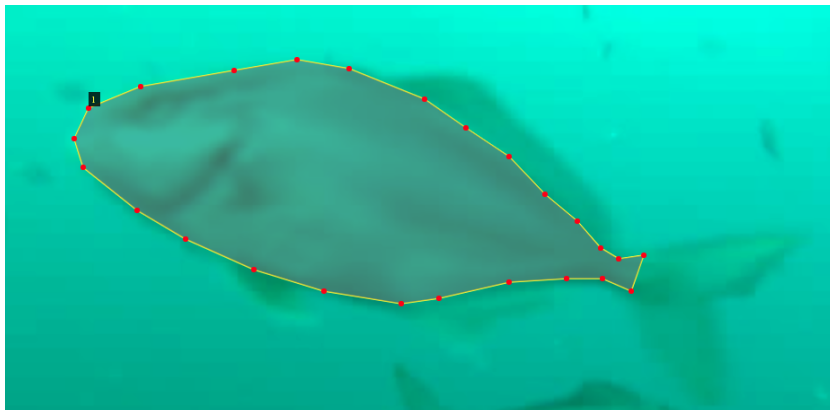

Here are the examples that are **Incorrect** and needed to be avoided

- Incorrect outline of the mouth. Don't cut the label according to the contour of the mouth

- Incorrect outline of the tail. Make sure that the label end near the end of the tail

- Incorrect outline of fish. Don't outline over the fins
